

## Jack Be Nimble

Y'know not much leaves me speechless. This one, however ... well, what do I say? It's crazy!

Our subject here, lets just call him Jack, apparently couldn't think of a better way to do a little welding on his truck's gas tank. Jack must be under the impression that the effects of gravity don't apply to him, not to mention the effects of sparks on fumes.

So, let's take a poll ... do you really think Jack is quick enough to dodge the falling Datsun when he leans back and bumps the pathetic prop being used to keep it up? Didn't think so. Again, folks, here is a fine example of a potentially deadly situation that could be rendered safe by using the right equipment, mixed with risk management and a little common sense.
